

Python & TypeScript developer. In a part-time role at **BuiltMind** I wrote **100+ production scrapers** on AWS Lambda plus internal tools for checking and fixing data. On my own, I have shipped **4Corners** to Google Play and built a full-stack portfolio tracker with risk metrics. Alongside, at MGG in Třešť I work as a **CNC Setter / Shift Manager**: I run afternoon and night shifts of 10–15 people and I'm the first point of escalation when something goes wrong. I follow esports, play competitive games and understand odds and live betting; rotating shifts incl. weekends are fine. I use AI tools (Claude Code, Codex) daily.

EXPERIENCE

- Co-founder & Lead Developer · CornerForge (two-person indie game studio)

Jul 2025 – present

 - Shipped **4Corners** to Google Play as the primary developer (150 levels, weekly leagues, ads and in-app purchases); now developing a second game, **Spin Lock**.
 - Built the league backend (server-side score submission, cohorts, weekly rollover); watch crash reports and store KPIs after each release and tune difficulty via Remote Config.
- Junior Data & Python Developer · BuiltMind, Prague — part-time, remote

Jan 2023 – Apr 2024

 - Wrote and maintained **100+ scrapers** for property-developer websites (CZ, DE, AT) on AWS Lambda — async requests, retries, one normalised schema, output to S3.
 - Built **Scraping Cleaner** (Streamlit tool to validate and bulk-fix scraped datasets from S3) and a daily data-quality check over the Notion API.
 - Prototyped a **chart extractor**: Selenium for charts on web pages, a CNN page classifier for PDF reports. Reference: “independence in task management, and a proactive approach.”
- CNC Setter / Shift Manager · MGG, Třešť

2016 – present

 - Run the afternoon and night shifts (10–15 people): assign the work, train new colleagues, keep production running.
 - First point of escalation for incidents — machine crashes, quality problems, injuries on shift: stabilise, decide quickly, report and fix the root cause.

SELECTED PROJECTS

- Portfolio Tracker · personal full-stack web app, in daily use

2026

 - Consolidates a stock & crypto portfolio from three brokers (Trading 212 API, XTB and Revolut statements); returns in USD/CZK, dividends, Czech tax report.
 - Risk metrics (volatility, Sharpe ratio, max drawdown), FIFO cost basis, reconciliation that spots duplicate or missing transactions.

Stack: TypeScript, React, PostgreSQL (Supabase), serverless functions, Vitest (~230 tests)
- ZručnáPráce · Django web app with Google sign-in and an interactive region map

2024

SKILLS

Backend	PostgreSQL (RLS, triggers, RPC), Supabase, REST APIs, serverless functions, cron jobs, Django
Programming	Python, SQL, TypeScript, C#, JavaScript
Scraping & data	asyncio/aiohttp, BeautifulSoup, Selenium, PDF/XLSX parsing, pandas, Streamlit, data validation
Tools	Git, GitHub Actions, AWS Lambda/S3, Vitest, NUnit, Unity; AI coding assistants (Claude Code, Codex)
People	Team leadership, shift work, incident handling, training

EDUCATION & LANGUAGES

- Mechanical Engineering · Secondary Technical School (SPŠ), Jihlava

2012 – 2016
- Czech native · English B2 · Before coding: Chrone.cz — self-funding game-server portal (~3 yrs), then a streamer group I managed · Portfolio & live demo: zdenekbudicek.github.io · 4Corners: Google Play, 4cornersplay.online
