Zdeněk Budíček

Python Developer · Data · IT Operations

budicekz97@gmail.com · Třešť, Czech Republic · Remote
Portfolio & live demo: **zdenekbudicek.github.io** · GitHub: **github.com/ZdenekBudicek** · **LinkedIn**
BuiltMind reference letter: **zdenekbudicek.github.io/files/recommendation-builtmind.jpg**

16 months of paid Python experience at BuiltMind, a mobile game shipped on Google Play as co-founder and primary developer, and years of leading production shifts. I build tools and automate repetitive work, investigate failures and see fixes through to release. Looking for a remote role in development, data or IT operations.

RELEVANT EXPERIENCE

Junior Data & Python Developer · BuiltMind — Jan 2023 - Apr 2024

- **100+ production scrapers** for property websites across CZ, DE and AT: asynchronous requests, retries and normalised data delivered through AWS Lambda and S3. Paid, part-time, remote.
- Built **Scraping Cleaner** for team-wide dataset validation and bulk correction, plus daily data-quality checks via the Notion API. Written recommendation linked above.

Co-founder & Developer · CornerForge · own studio, alongside full-time job — Jul 2025 - present

- Primary developer in a two-person indie studio; shipped **4Corners on Google Play**. Built gameplay, cloud saves and server-side leagues with weekly rollover.
- Own implementation and releases across C#, JavaScript Cloud Code and Unity Gaming Services; investigate crash reports and tune the game through Remote Config.

CNC Setter / Shift Manager · MGG, Třešť — 2016 - present

- Joined as a CNC setter in 2016 and progressed to shift manager; now lead afternoon and night shifts of **10-15 people**: allocate work, train colleagues and respond to machine failures and quality incidents. Prioritise action, escalate and keep production running.

SELECTED WORK · SOURCE CODE LINKED

Trackora · portfolio tracker · TypeScript / PostgreSQL

Personal stock & crypto tracker in English and Czech: Trading 212 API sync, XTB/Revolut statement import with duplicate detection, row-level security, nightly company-financials worker on GitHub Actions and Czech tax calculations (per-lot FIFO, ČNB rates). **620 automated tests**, CI green; interactive demo with invented data.

SQL Shop Inventory · Python / PostgreSQL

Refactored learning project: atomic orders with stock row locks and idempotent cancellation. **28 tests**, including real PostgreSQL tests for competing buyers and concurrent cancellations.

4Corners Save Conflicts · C# / .NET

Focused adaptation of game save logic: deterministic snapshot selection preserves advanced account progress during sign-in. Handles versions from different identities; **23 boundary and regression checks**.

SKILLS & WORKING STYLE

Development	Python, SQL, TypeScript, C#, JavaScript; PostgreSQL, Django, REST APIs, AWS Lambda/S3, Supabase, Git.
Data & quality	asyncio/aiohttp, pandas, Streamlit; validation, reconciliation, pytest, Vitest, GitHub Actions.
Workflow	AI-assisted development with Claude Code and Codex; regression testing and documented project limitations.
Leadership	Leading shifts of 10-15 people, incident handling, training colleagues; shift work is fine.

EDUCATION & LANGUAGES

Mechanical Engineering · Secondary Technical School (SPŠ), Jihlava · 2012 - 2016
Czech: native · **English:** B2, comfortable with daily work communication
