

I build and run my own backends: a **full-stack portfolio tracker** on PostgreSQL with row-level security, triggers, serverless functions and scheduled jobs; the **backend of 4Corners**, a mobile game live on Google Play (leagues and leaderboards in server-side Cloud Code, cloud save with migrations); and **100+ scrapers on AWS Lambda** in a part-time role at BuiltMind. I work AI-assisted every day (Claude Code, Codex) and treat AI output like a colleague's pull request — read, question, test. Working as a CNC Setter / Shift Manager taught me ownership and calm incident handling.

SELECTED PROJECTS

Portfolio Tracker · full-stack web app, in daily use2026

- PostgreSQL (Supabase) with row-level security; triggers keep positions and cash consistent with the transaction ledger.
- Serverless edge functions + scheduled jobs (pg_cron, GitHub Actions): price refresh with a provider fallback chain and a shared cache.
- Resumable broker sync (time limits, API throttling); import with duplicate detection; API keys encrypted at rest (pgcrypto + Vault); 229 Vitest unit tests.

Stack: TypeScript, React, PostgreSQL, Supabase, Deno, GitHub Actions, Vitest

4Corners · mobile game live on Google Play — primary developerJul 2025 – present

- Leagues and leaderboards on Unity Gaming Services with server-side Cloud Code (JavaScript): score submission, cohorts, bots, weekly rollover.
- Cloud save with merge rules and versioned migrations; platform sign-in; server-side account deletion; 3,000+ automated tests; scripted Android & iOS builds.

Stack: C#, Unity 6, JavaScript (Cloud Code), Firebase, NUnit — AI-assisted (Claude Code, Codex)

zipfill · C# / .NET command-line tool2026

- Recovers missing files from ZIP archives: long paths, Unicode normalisation, CRC32 checks and no-overwrite extraction; 38 regression checks.

EXPERIENCE

Co-founder & Developer · CornerForge (two-person indie game studio)Jul 2025 – present

- Build and operate 4Corners end to end (above): gameplay, backend services, releases, store compliance; now developing a second game, **Spin Lock**.

Junior Data & Python Developer · BuiltMind, Prague — part-time, remoteJan 2023 – Apr 2024

- **100+ scrapers** running as AWS Lambda functions: asyncio/aiohttp, retries with backoff, per-site mapping onto one schema, output to S3.
- Internal tools: Scraping Cleaner (Streamlit + S3), a daily data-quality Lambda over the Notion REST API.

CNC Setter / Shift Manager · MGG, Třešť2016 – present

- Run afternoon and night shifts of 10–15 people; first point of escalation for incidents: stabilise, decide fast, fix the root cause.

SKILLS

Backend	PostgreSQL (RLS, triggers, RPC), Supabase, REST APIs, serverless functions, cron jobs, Django
Programming	Python, SQL, TypeScript, C#, JavaScript
Scraping & data	asyncio/aiohttp, BeautifulSoup, Selenium, PDF/XLSX parsing, pandas, Streamlit, data validation
Tools	Git, GitHub Actions, AWS Lambda/S3, Vitest, NUnit, Unity; AI coding assistants (Claude Code, Codex)
People	Team leadership, shift work, incident handling, training

EDUCATION & LANGUAGES

Mechanical Engineering · Secondary Technical School (SPŠ), Jihlava2012 – 2016

Czech native · English B2 · **Before coding:** Chrone.cz — self-funding game-server portal (~3 yrs), then a streamer group I managed · **Portfolio & live demo:** zdenekbudicek.github.io · **4Corners:** Google Play, 4cornersplay.online
